

**CLAIMS**

1. A soap holding device comprising:

5       a retaining ring to retain a cake of custom shaped soap within a bottom seat;  
underneath said bottom seat is an adhesive disc of the peel off type;  
said adhesive disc being pre-glued underneath said bottom seat;  
releasably connecting means to releasably attach said retaining ring to said bottom  
10      seat.

2. A soap holding device as in claim 1 wherein:

said releasably connecting means take on the form of notches and complementary  
notches.

15       3. A soap holding device as in claim 1 further comprising:

gateways disposed around the periphery of said retaining ring to evacuate liquids;

20       4. A soap holding device as in claim 1 further comprising:

a narrowing periphery to funnel in onto said complementary notches of said bottom  
part.

5. A soap holding device having the following method of soap cake replacement:

turning the retaining ring slightly disengages notches on said retaining ring from complementary notches on a bottom seat; once said retaining ring is removed from said bottom seat, a custom soap, generally but not necessarily used up, is removed to be replaced by another cake of custom soap, and said retaining ring, which has a profile designed to be self-guiding by the narrowing of its periphery, funnels in onto said bottom part's said complementary notches.

10

6. A soap holding device having the following method of installation:

an adhesive disc underneath a bottom seat has a peel off layer to expose the adhesive surface of said adhesive disc so that said bottom seat can be installed on a surface.
